HAND CARRY BULK TRANSFER PUMP

Model 7A

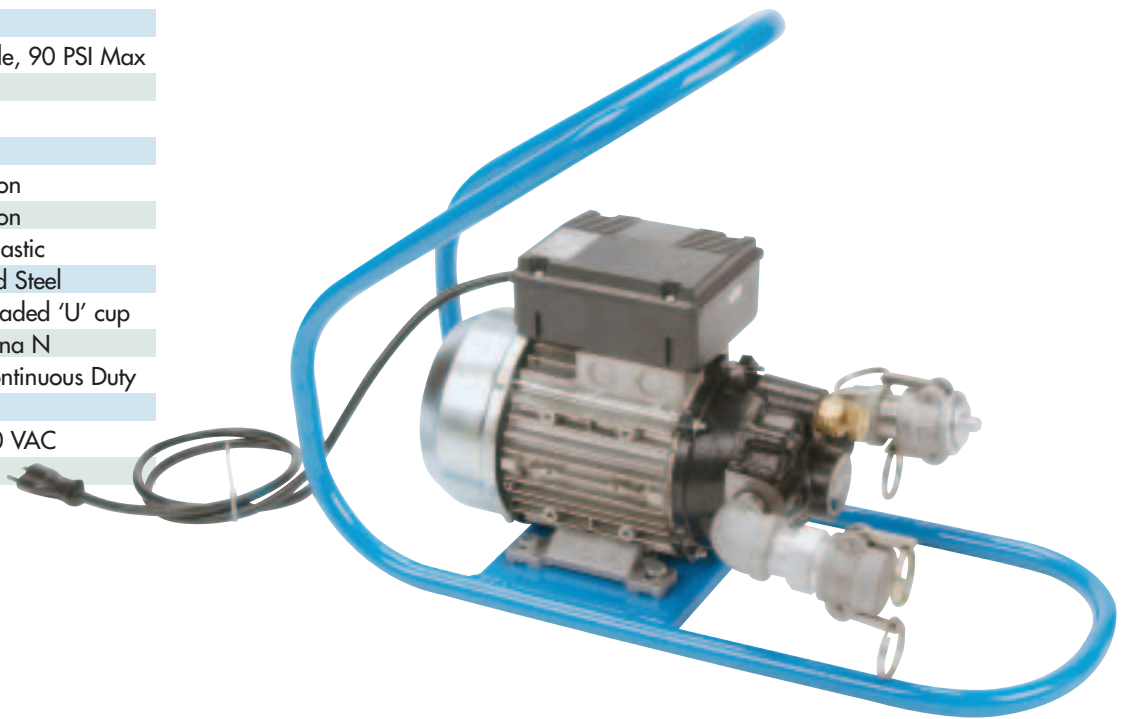

Designed for transfer of Motor Oils, Transmission Fluids, Hydraulic Fluids and 100% Antifreeze this versatile vane pump offers economy, reliability and simplicity. The five vane rotor design provides for efficient positive displacement pumping. This, in conjunction with the continuous duty rated, one horsepower motor allows for transfer of a wide range of fluids up to 2,000 SSU. LiquidDynamics Bulk Transfer Pumps are designed to automatically minimize current draw by responding to increases in viscosity by limiting output flow thus staying within amperage limitations imposed by 115 VAC power sources.

The unique hand carry frame mount is extremely portable, yet can empty a 55 gallon drum of oil in less than 8 minutes. An integral on/off rocker switch and 6' grounded power cord are provided for convenient pump connection and control. The use of a cast iron pump body bolted directly to the motor ensures a rigid and maintenance free alignment between pump and motor.

The hand carry frame is constructed of heavy gauge 3/4" steel tubing for strength and powder coated for durability. The pump is fitted with quick connect cam lock fittings to allow easy attachment of available accessories such as suction hose, stinger, discharge hose and nozzle.

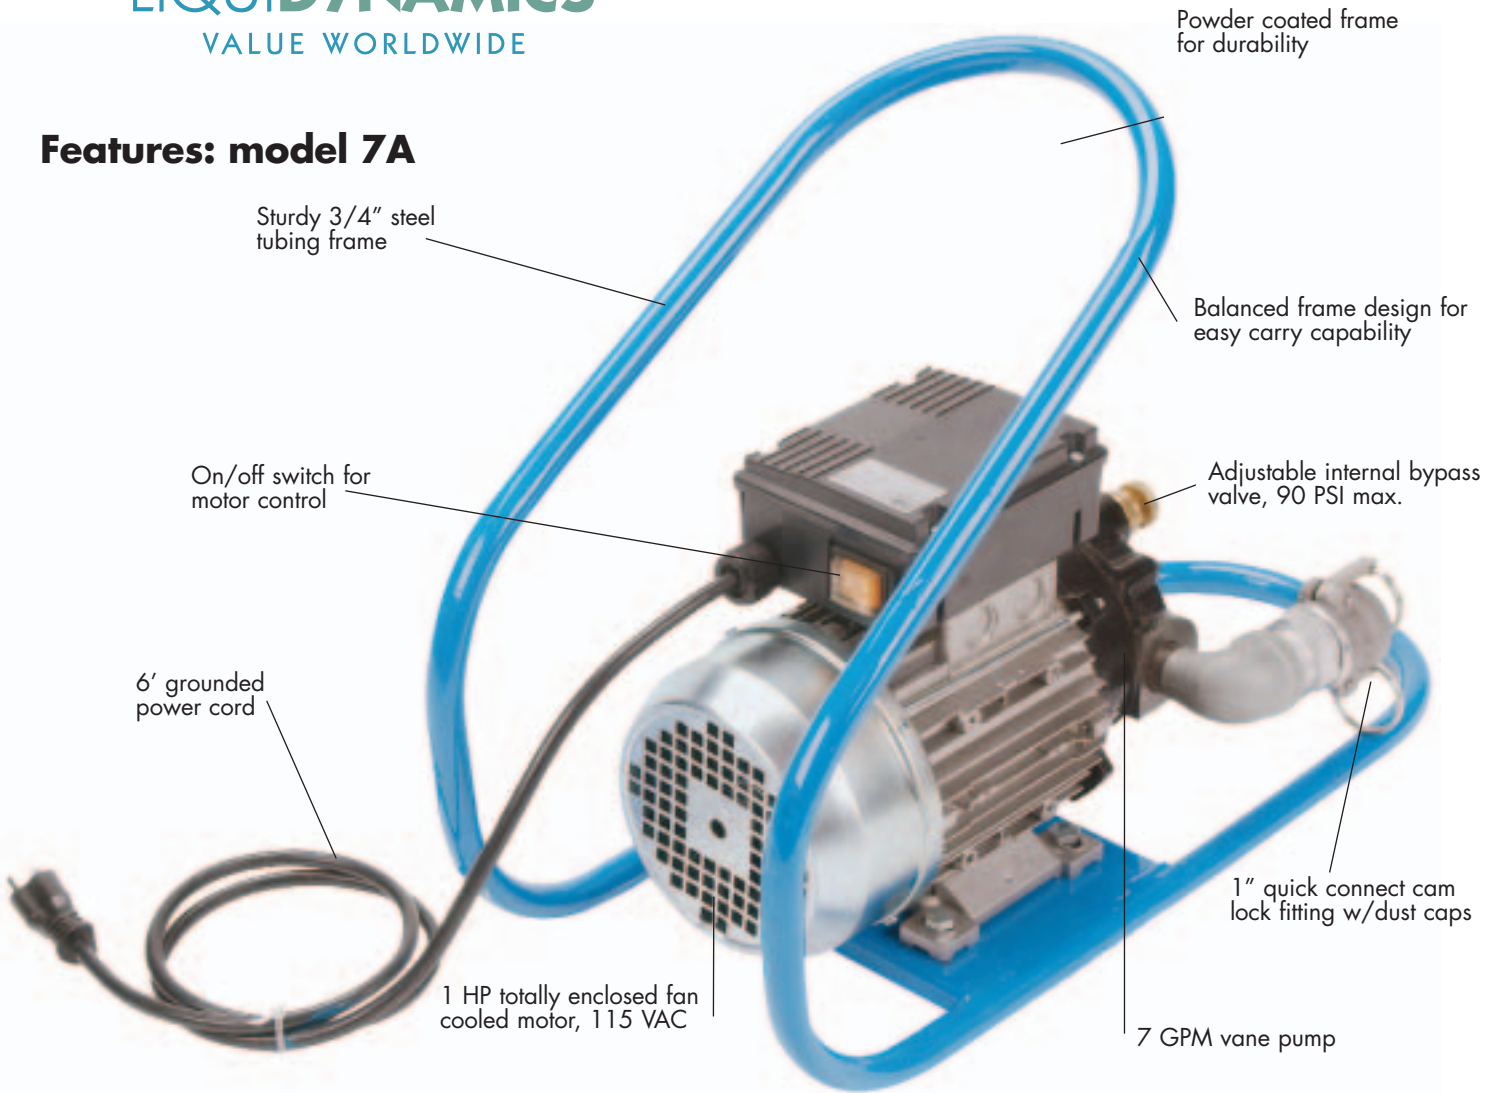

Specifications:

Part Number	33261
Model	7A
Nominal GPM	7 GPM
Operating Pressure	Adjustable, 90 PSI Max
Pump Type	Vane
Fluid Inlet	1"
Fluid Outlet	3/4"
Body	Ductile Iron
Rotor	Ductile Iron
Vanes	Thermoplastic
Shaft	Hardened Steel
Seal	Spring loaded 'U' cup
Elastomers	Viton, Buna N
Motor	TEFC, Continuous Duty
Horsepower	1 HP
Voltage	115/230 VAC
Amperage	6 Amp
Weight	25 lbs.

Features: model 7A

Optional Equipment:

P / N **32107**
High Volume
Oil Control Valve

P / N **81210-10**
1" x 10' Suction/Discharge Hose

P / N **950083**
Suction 1" x 4'
Stinger w/ cam lock
